Aspiring Data Analyst | Fresher

Proficient in Python programming for data analysis, and predictive modeling using libraries like Pandas, NumPy
Proficient in MySQL for data querying, manipulation, and database management.

Advanced expertise in Microsoft Excel for data cleaning, pivot tables, VBA scripting, and statistical analysis.

Experienced in creating insightful Power BI dashboards and reports to support data-driven decision-making.

PROFESSIONAL SYNOPSIS

- Well versed with PYTHON programming ,with NUMPY from ZAPCODE
 - Well versed with MySQL for data querying, manipulation, and database management
 - Microsoft Excel for data cleaning, pivot tables, VBA scripting, and statistical analysis.
 - Power BI dashboards and reports to support data-driven decision-making.
-

ACADEMIC CREDENTIALS

2022 78% (MBA) Master of Business Administration- Completed CIBMRD, Nagpur
(Specialization :: 1st Finance, :: 2nd Marketing)
(Central institution of business management research & development)

2017 50.83% (BCCA) B.com Computer Application - R.S.Mundle Dharampeth College, RTMNU

Hsc (Commerce) - R.S.Mundle Dharampeth College, Nagpur with

SSC - Hadas High School, Nagpur with

PROJECTS

- **Car Rental Project (PowerBI)** • Created a Power BI dashboard to analyze automotive sales across dealerships. Integrated vehicle models, sales, and regional data to visualize KPIs, revenue trends, and performance insights. Employed DAX for measures, slicers for interactivity, and visuals to support business decisions in marketing, inventory planning, and dealership strategy. 📁 [ProjectLink](#)
- **E-Commerce Data Analysis (Excel)** • Utilized PowerBI to clean and preprocess the Ecommerce dataset, ensuring consistency and accuracy of the data. • Analysis various factors contributing to brand success, including customer reviews, ratings, discounts and maximum • To identify key drivers of Platform performance. • Generated actionable insights to inform marketing strategies and product development initiatives. 📁 [ProjectLink](#)
- **BLINKIT STORE ANALYSIS(EXCEL)** • Analyzed large-scale retail sales data for BlinkIT, applying statistical techniques and data visualization to uncover product, location, and outlet-based sales trends. Generated actionable insights to support business decisions and drive sales optimization across diverse product categories and store types. 📁 [ProjectLink](#)
- **Contact Book (SQL PYTHON)** • Created a Contact Book application using Python and SQL integration. Utilized Python libraries such as sqlite3 to connect and interact with a SQL database, enabling storage, retrieval, updating, and deletion of contact details. The program supports functions like adding new contacts, searching by name or number, editing entries, and deleting records. SQL queries were embedded within Python code to perform operations efficiently, making the Contact Book dynamic and user-friendly for managing personal or professional contact information. 📁 [ProjectLink](#)
